DETAILED ACTION

Terminal Disclaimer

The terminal disclaimer filed on 2/7/2007 disclaiming the terminal portion of any patent granted on this application which would extend beyond the expiration date of patent application no. 09/682,900, which is now issued patent no. 7,029,920 has been reviewed and is accepted. The terminal disclaimer has been recorded.

Allowable Subject Matter

Claims 35 – 40 are allowed.

The following is an examiner's statement of reasons for allowance:

The cited prior art neither teach nor fairly suggest the method of determining a measurement bias in a measurement of a constituent concentration level in a sample gas for an emissions monitoring system, wherein the method incorporates the steps of:

1. establishing a sample gas flow from an emission stream into a sample gas line;
2. removing water from the sample gas flow and cooling the sample gas flow to a temperature below about 41 °F to produce a cooled, dried sample gas flow;
3. determining the constituent concentration level for the cooled, dried sample gas flow;
4. introducing a span gas having a known span gas constituent concentration level into the sample gas flow to form a combined sample and span gas flow, the span gas being introduced at a desired span gas flow rate;
5. removing water from the combined sample and span gas and cooling the combined

sample and span gas to a temperature below about 41 °F to produce a cooled, dried, combined

sample and span gas flow;

6. determining a combined sample and span gas constituent concentration level for the cooled, dried, combined sample and span gas flow.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
